

Revealed Cosmos Hiring Package v1

Portfolio positioning, site packaging, product offers, resume angle, copy pack, and deployment instructions.

Strategic Decision

Do not lead with only **Narrative Designer**. That title is competitive and can imply a senior studio role. Lead with a more hireable bridge position: **Worldbuilding & Lore Documentation Specialist / Game Writing Support / Narrative Systems Assistant**.

The sellable promise: **I turn scattered lore, quest ideas, factions, world rules, and visual mood into a clean package a team can actually use.**

Best Hiring Lanes

- **Lore & Worldbuilding Documentation:** cleaning messy lore into world bibles, faction sheets, magic systems, and internal logic.
- **Quest / Faction Narrative Support:** building quest hooks, branching outcomes, faction pressure, and player-facing story logic.
- **Visual Story Proof Packaging:** combining selected images, short descriptions, mood/tone notes, and PDFs into a presentable pitch/portfolio package.

Selected Portfolio Artifacts

1. **ATLAS 3I / Second Earth** - Strongest original-IP proof: metaphysics, social hierarchy, rituals, ship culture, voice, and long-form setting architecture.
2. **The Siamic Peninsula** - Clear fantasy lore bible: factions, history, magic system, characters, central conflict, tone, and story hook.
3. **The Artifact of Silent Ruin** - Most game-relevant sample: RPG quest hook, investigation, faction conflict, branching outcomes, and player-allegiance paths.
4. **Psychopunk Tone Bible** - Shows tone direction, voice rules, motifs, rhythm, and cross-media style control.
5. **PROTOTEUS: The Waking Cycle** - Shows prose quality, scene atmosphere, body-centric imagery, and sci-fi narrative voice.
6. **Keyframe / Mood Direction** - Shows ability to create visual proof and tone direction for pitch decks or early development.

Website v0.2 Structure

The live GitHub Pages site should be rebuilt around hiring, not mythology. Keep the dark cinematic style, but make the content proof-driven.

- **Hero:** Worldbuilding / Lore Documentation / Visual Narrative Proof. Structured story worlds for games and interactive media.
- **Selected Work:** 5-6 cards with images and PDF links.
- **Services:** three productized offers that a client can understand quickly.
- **About:** short, practical, proof-driven. Mention linguistics and teaching only as structure/clarity assets.
- **Contact:** email + resume link + platform links later.

Three Products to Sell First

Lore & Worldbuilding Cleanup Sprint - For teams with scattered lore or inconsistent world rules. Deliverables: world pillars, faction map, conflict logic, 3-5 page cleaned reference brief, and next-step notes.

Quest & Faction Narrative Pack - For RPGs, visual novels, and interactive stories. Deliverables: quest hook, player objective, faction pressure, branching outcomes, and player-facing logic.

Visual Story Proof Package - For creators who need a pitch page or proof-of-concept package. Deliverables: concept summary, mood/keyframe selection, story-world framing, and outreach-ready page.

Resume Positioning

Use the resume titled **Worldbuilding & Lore Documentation Specialist | Game Writing Support | Narrative Systems**. It is easier to pitch for assistant, contract, indie, support, documentation, lore, and game-writing bridge roles than a pure senior-sounding "Narrative Designer" title.

Platform Copy

One-line positioning

Worldbuilding, lore documentation, quest structure, and visual narrative proof for games and interactive media.

Short bio

I help indie developers, writers, and early-stage IP teams turn scattered lore, faction concepts, world rules, and story fragments into structured worldbuilding systems, quest outlines, tone guides, and portfolio-ready proof.

Outreach hook

Hi, I help early-stage game and story teams clean up scattered lore, faction logic, quest structure, and worldbuilding notes into a clear development-ready package. I can start with a short diagnostic sprint and return a structured brief, sample quest/world section, and concrete next-step recommendations.

Visual Selection Rules

- Use polished cinematic world/keyframe images for site cards and hero visuals.
- Use diagram/title cards only inside project pages or thumbnails when they explain deliverables.
- Do not lead with raw screenshots of documents; those look unfinished. Use PDFs as downloads, not hero visuals.
- Do not upload full-resolution private art, raw prompts, personal documents, or full unpublished canon.
- Best immediate hero visual: Revealed Cosmos brand/eye banner. Best work-card visuals: ATLAS 3I cover, Siamic cover, Artifact quest cover, psychopunk character image, city/cave keyframe.

Execution Order

- Upload site v0.2 package to GitHub and confirm the live page updates.
- Use the new resume PDF for game/writing/worldbuilding support roles.
- Update Upwork headline and bio using the Social Copy Pack.
- Add the live site link to Upwork, LinkedIn, Linktree, and outreach messages.
- Only then start outreach. Proof package before pitch.
