

A Fantasy Worldbuilding Design Document
(Factions • History • Magic Systems • Narrative Architecture)

1. WORLD OVERVIEW

The story takes place on the Siamic Peninsula, a chaotic and politically unstable region where religion, magic, and emerging magical technology exist in constant conflict.

The peninsula is a land of powerful kingdoms, secret religious orders, dangerous magical experimentation, and hidden political conspiracies. Magic once dominated the world completely, but new forces — mechanical experimentation and forbidden magical research — are beginning to challenge the old order.

Cities across the peninsula are filled with taverns, spies, religious inquisitors, alchemists, mercenaries, and strange magical constructs. Beneath the surface of everyday life, powerful factions struggle for control of magical knowledge and political influence.

The balance between faith, magic, and mechanical innovation is beginning to collapse — and with it, the stability of the entire world.

2. MAJOR FACTIONS

The Secret Order of Rymanos

A powerful religious institution devoted to maintaining the sacred laws of magic. The Order believes that magic is a divine force granted by the god Rymanos and must remain under strict control.

The Order hunts practitioners of forbidden magic such as necromancy and reality manipulation. Their influence extends into royal courts, military structures, and intelligence networks across the peninsula.

Their greatest fear: that uncontrolled magic will destroy the natural order of the world.

The Mechanist Circle of Llar-da-Gang

A secretive faction of arcane engineers and experimental wizards who believe magic should evolve through technology.

Their laboratories combine mechanical engineering, alchemy, and unstable magical artifacts. They experiment with magical machines, animated constructs, and weaponized magical devices.

While the religious orders see them as dangerous heretics, the mechanists believe they are building the future of the world.

The Royal Court of Fernardin Lembados Nazinnin

A decadent monarchy ruling large parts of the peninsula through political manipulation, espionage, and military power.

King Fernardin Lembados Nazinnin is known for his volatile temper and ruthless ambitions. His court is filled with spies, advisors, assassins, and secret agents competing for influence.

The monarchy seeks to control both religious institutions and magical innovation — but the growing conflict between the two threatens to destabilize the kingdom.

The Millican Informant Network

A decentralized network of tavern owners, smugglers, black-market traders, and information brokers.

Millicans operate in the shadows of society, gathering and selling information to the highest bidder. Taverns across the peninsula serve as secret hubs for political intelligence.

Though they appear harmless, their information network often determines the outcome of political conflicts.

3. KEY CHARACTERS

Sir Seder

A royal advisor and experienced warrior known for his reckless courage and violent pragmatism.

Though officially a respected member of the royal court, Sir Seder is widely considered unreliable due to his drinking habits and unpredictable behavior. Despite this reputation, he possesses exceptional combat instincts and a dangerous willingness to act when others hesitate.

Doctor Goll

A nervous but highly skilled healer specializing in alchemy and magical medicine.

Doctor Goll often finds himself dragged into dangerous situations far beyond his comfort zone. His knowledge of potions, magical toxins, and strange magical reactions frequently becomes essential to survival.

The Archer

A mysterious operative assigned to secretly monitor Sir Seder and Doctor Goll during their missions.

Highly disciplined and extremely capable, she serves as both protector and observer — ensuring that the mission continues even when the royal advisors lose control of the situation.

Llar-da-Gang

A brilliant mechanist wizard and master of magical engineering.

Working from hidden laboratories, he experiments with the fusion of magic and machinery. His ultimate goal is to reshape the magical foundations of the world itself.

King Fernardin Lembados Nazinnin

The ruler of the peninsula's most powerful kingdom.

Ambitious, volatile, and increasingly paranoid, the king is determined to expand his influence over both religious authority and magical innovation.

His decisions may ultimately determine whether the peninsula descends into war.

4. MAGIC SYSTEM

Magic in the Siamic Peninsula is powerful but unstable.

Spellcasting relies on a combination of ritual knowledge, mental discipline, and magical artifacts. Improper use of magic can cause severe consequences including physical mutation, time distortions, or spontaneous magical catastrophes.

Alchemy plays a central role in magical practice. Potions and enchanted substances can alter perception, bypass magical defenses, or temporarily manipulate reality.

Example:

Potion of Slowed Attention

This alchemical mixture temporarily disrupts magical detection systems by altering the user's perception of time and magical awareness.

Side effects may include temporary physical transformation, including drastic changes in size or form.

Because of these unpredictable effects, magical potions are considered highly dangerous.

5. HISTORY OF THE PENINSULA

The Age of Sacred Magic

Ancient religious institutions established control over magical practice, declaring magic a divine force granted by Rymanos.

Strict magical laws were introduced to prevent catastrophic misuse of magic.

The Mechanist Awakening

Centuries later, independent researchers began experimenting with magical technology.

The first magical machines appeared, combining alchemy, engineering, and arcane energy.

The Rise of Llar-da-Gang

One of the most brilliant mechanist wizards emerged as a leading figure in magical engineering.

His experiments pushed the boundaries of magical knowledge and alarmed religious authorities.

The Brewing Conflict

As mechanist innovations continued to advance, tensions between religious orders and technological innovators escalated.

The balance of power across the peninsula began to fracture.

6. NARRATIVE TONE

The narrative tone blends several elements:

- dark fantasy
- grotesque humor
- political intrigue
- magical absurdity
- dangerous experimentation

Characters are flawed, cynical, and frequently forced into chaotic situations created by unstable magic and corrupt institutions.

The world is dangerous, unpredictable, and often strangely humorous despite the severity of its conflicts.

7. CENTRAL CONFLICT

The central tension of the setting emerges from three competing forces:

1. Religious institutions attempting to control magic
2. Mechanist innovators attempting to transform magic through technology
3. Political powers attempting to weaponize both systems

These forces create constant espionage, conspiracies, and open conflict throughout the peninsula.

8. STORY HOOK

Recent magical experiments suggest that magic itself may be disappearing from the world.

As factions race to secure the remaining sources of magical power, Sir Seder and his companions become entangled in a conspiracy that may determine the fate of the entire peninsula.

The disappearance of magic could reshape the world forever.
